(54) Title: SIGNAL FILTERING

(57) Abstract: A method of filtering an information signal $x(t)$, the method comprising modifying frequency domain components $X(k,n)$ of the information signal according to a desired filter response $F(k,n)$; wherein the step of modifying frequency domain components further comprises modifying (105) frequency domain components of a first frame of said information signal according to a first actual filter response $F'(k,n)$, the first actual filter response being a function (Φ) of the desired filter response and information (108) related to a previous frame of the information signal.
